Method Development Scientist (Level 3) – Technical Lead

Department: Method Development
Hours per week: 37.5
Basis: Permanent

Job Purpose

The Method Development Scientist organizes and manages scientific research and data to achieve regulatory and market driven objectives including method development and product support.

Key Responsibilities

- Interpret experimental results and collate data for use in regulatory submissions, notifications and peer reviewed publications
- Manage multiple scientific projects (with 3 or more major projects concurrently)
- Provide product support to internal stakeholders, especially Regulatory Affairs, QA, QC and Sales in the development and validation of products and processes to meet business needs and current legislation
- Maintain project lead times and run key projects ensuring the interpretation of business requirements for product development. To also ensure that project details are communicated to all sponsors and stakeholders, and communicate project requirements to the Method Development Leader and /or Head of QC & Method Development
- Deputise for Method Development Team Leader as and when required

Knowledge, Experience & Skills Required

- Degree in chemistry or biology
- Demonstrable experience in Pharma/Biotechnology
- Line management experience would be beneficial (although not essential)
- Experience of managing multiple projects and stakeholders
- Excellent communication skills
