Mechanical Engineer

Department: Engineering
Hours per week: 37.5
Basis: Permanent

Job Purpose

To complete Mechanical engineering tasks and projects with a team of multi-skilled Engineers who work within all areas both internal and external across all Worthing facilities.

This will include administrative duties for the engineering function and the use of the Maximo Asset Management System.

Key Responsibilities

- To work collaboratively with other Engineers, Team Leaders / Supervisors / Managers within the business to ensure operational demands are met and a consistent approach is taken across all areas
- To ensure all Maximo Work Orders are raised, actioned, and completed / closed in a timely manner
- Assist in delivery of Engineering projects under the management of both the Engineering Manager and the Head of Engineering
- To provide back up to all trade groups and be able to undertake mechanical repairs as required
- To participate in both major and minor projects to their successful completion, to complete relevant documentation and ensure validation to the correct standards before ensuring a smooth handover to trades and production

Knowledge, Experience & Skills Required

- Relevant Engineering qualification / served a formal engineering apprenticeship
- Professional, methodical individual with excellent communication skills
- Flexible approach with excellent problem-solving organisation / planning and time management skills
- GMP and Steriles experience with a focussed approach to support production activities
- To be able to work and react to targets and deadlines
- To communicate at all levels and lead multi-disciplinary teams on projects
- High level of skill and knowledge in relation to engineering function processes.
