## Process Improvement Technologist

Department: Process Improvement

Hours per week: 37.5

Basis: Fixed Term Contract (12 months)

### Job Purpose

The Process Improvement team assess, monitor, investigate, propose and implement process improvements using scientific data and information. This ensures “right first time” products whilst meeting customer delivery dates.

### Key Responsibilities

- Investigation of Non Conformances by undertaking a thorough review, making recommendations and implementing changes as required, ensuring supporting documentation is completed
- Ensuring any Change Controls/Non Conformances/CAPAs/Effectiveness Checks and Protocol Deviations are raised and closed in a timely manner
- Conducting data collection, trending and assessment of data as a basis for the rationale for any recommended process improvement activities
- Work with the team to review current production and equipment processes, suggesting areas for improvement through technical reports
- To undertake Root Cause Analysis prior to proposing or implementing any process improvement to ensure a scientific, analytical, rational and measured approach is being undertaken
- Attend Production Scheduling meetings, generating team minutes and ensuring actions are completed
- Maintaining a product by batch spreadsheet to aid trending and provide rationale for suggested process improvement

### Knowledge, Experience & Skills Required

- Experience in a GxP environment
- Able to demonstrate excellent problem solving skills
- Understanding and appreciation of pharmaceutical regulatory requirements
- Competent Excel user and basic Maths skills
- Experience in a Process Improvement role would be beneficial although not essential
